

Nrusingha Prasada Khadanga

khadanganrusingha@gmail.com | 7008254667 | Portfolio | linkedin.com | github.com

Technologies

Languages: Java (17), Rust(1.94.0), Python (3.12), JavaScript (ES6)

Frameworks: Spring Boot (3.2), React (18), Node.js, Express (4.0), FastAPI

AI/ML: Pandas (2.3), Numpy, PyTorch, NLP, Model Training & Evaluation, Data Preprocessing, Generative AI, Prompt Engineering

Databases: MySQL, MongoDB (7.0)

Tools: Git, GitHub, Postman, Linux, Tailwind CSS, Vercel

Soft Skills: Communication, Team Collaboration, Problem Solving, Adaptability

Experience

Java Full-Stack Intern, Millennium Software Solutions

- Implement OOP, separation of concerns, and structured problem-solving to deliver maintainable full-stack features and integrate AI capabilities for a Cryptocurrency Trading Platform.
- Developed backend services using **Spring Boot** and REST APIs; reduced average API response time by **15%** through **caching** and query optimization.
- Secured APIs with **Spring Security**, **JWT** sessions and basic **2FA** for sensitive flows.
- Integrated a **generative AI-based assistant** for in-app support, automating repetitive queries and improving response availability by **40%**.
- Tech: **Java 17, Spring Boot 3.2.4, Hibernate, MySQL, React(Vite)**.

Projects

Real-Time Microstructure Inference System | GitHub

- Designed a microstructure intelligence system with Rust-Python that utilizes TCN as teacher and DeepLOB+TFT as student through knowledge distillation to reconstruct order-flow toxicity from L2 (MBP – Market-by-Price) feeds. Reached 20–30 milliseconds of latency in Real-time, 6.85e-7 PyTorch–ONNX difference, tested 47 pipeline cells with no crashes, and implemented a WebSocket dashboard.
- Tools Used: Rust (ort, tokio, memmap2, Polars), Python (PyTorch, torchdistill, TCN, DeepLOB, TFT, ONNX opset 17), React + TypeScript, SPSC zero-copy shared memory (/dev/shm), Docker

PII-Detector | GitHub

- AI-powered PII detection and masking for unstructured text and documents in the MERN Stack. Clean downloads, editable previews, live highlighting, and a polished uploader are all features of the React frontend. Python NLP models are connected to the Node.js API for smooth integration.
- Tools Used: React, Tailwindcss, Node, Express, mongoDB, FastAPI (Python)

Cryptocurrency Trading Platform | GitHub

- Created a full-stack cryptocurrency trading platform with a Spring Boot backend and a React frontend. With features like two-factor authentication, real-time trading, and thorough wallet management for a full portfolio and trading solution, the application offers a safe and responsive user experience and integrates an AI-powered chatbot for real-time user query management.
- Tools Used: React, Tailwind CSS, Java, Spring Boot, MySQL, Gemini api

E-commerce Store | GitHub

- I developed E-Shop, a comprehensive e-commerce SPA with DummyJSON mock API, dynamic routes, React Context for global state, responsive design, error handling, lazy loading, and performance optimisations, using React and Tailwind CSS.
- Tools Used: React, Tailwind CSS

Education

GIET University, B.Tech in Computer Science Engineering (AIML)

CGPA: 6.8/10

Coursework: Computer Architecture, Learning Algorithms, Computational Theory

Arihant Higher Secondary School, Intermediate (Science)

Percentage: 74.5

2022 – Current

2019 – 2021

Ballipadar High School, Matriculation

Percentage: 67.7

2018 – 2019

Certificates

- AWS Educate - Introduction to Generative AI (Trained)
- Introducing AI Fundamentals - SAP Learning
- Introduction to Large Language Models - Google Cloud Skill Badge
- The Complete MERN Full-Stack Web Development Bootcamp(Udemy)
- NPTEL - Big Data Computing
- Prompt Design in Vertex AI - Google Cloud Skill Badge
- Developing Classification Models with Python ML Client for SAP HANA (Intermediate) - SAP Learning
